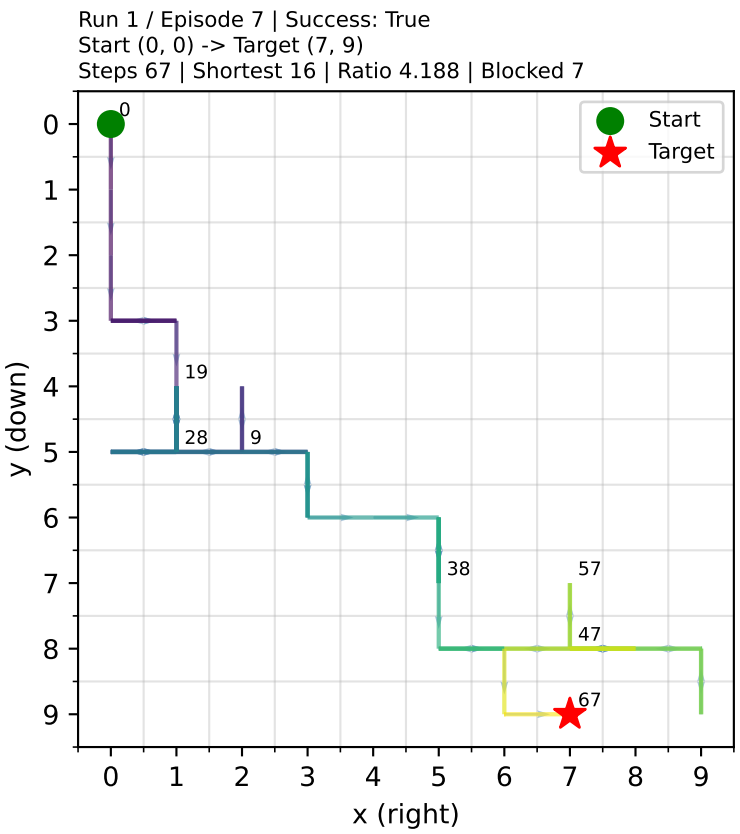
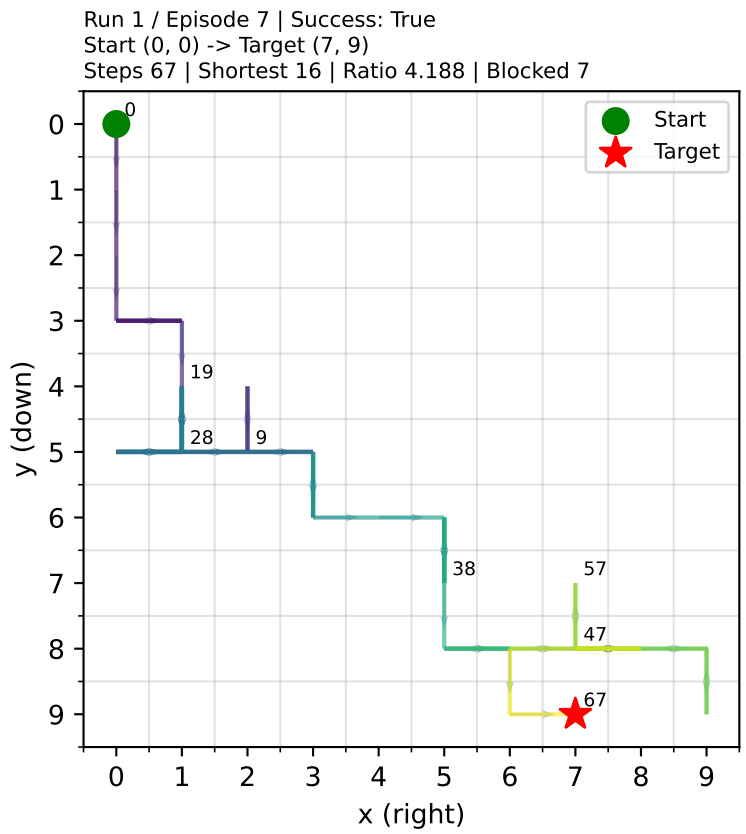
Actual evaluation trajectories | split | 10x10
Each panel uses its own episode target; selected episodes may have different targets.
Path colors progress from early to late; numbers indicate action steps.

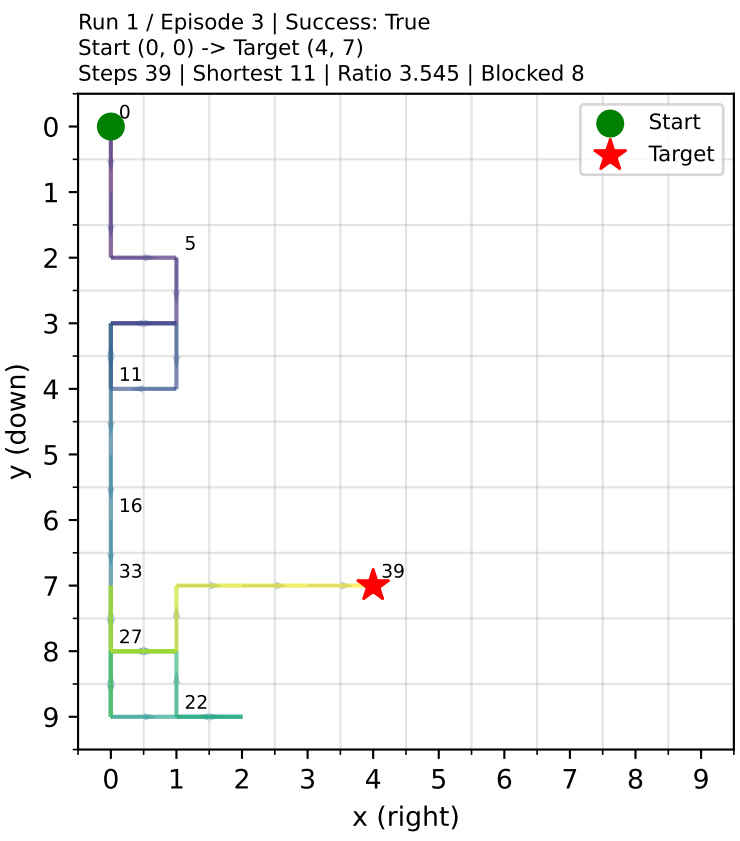
Q-Learning / Best Path



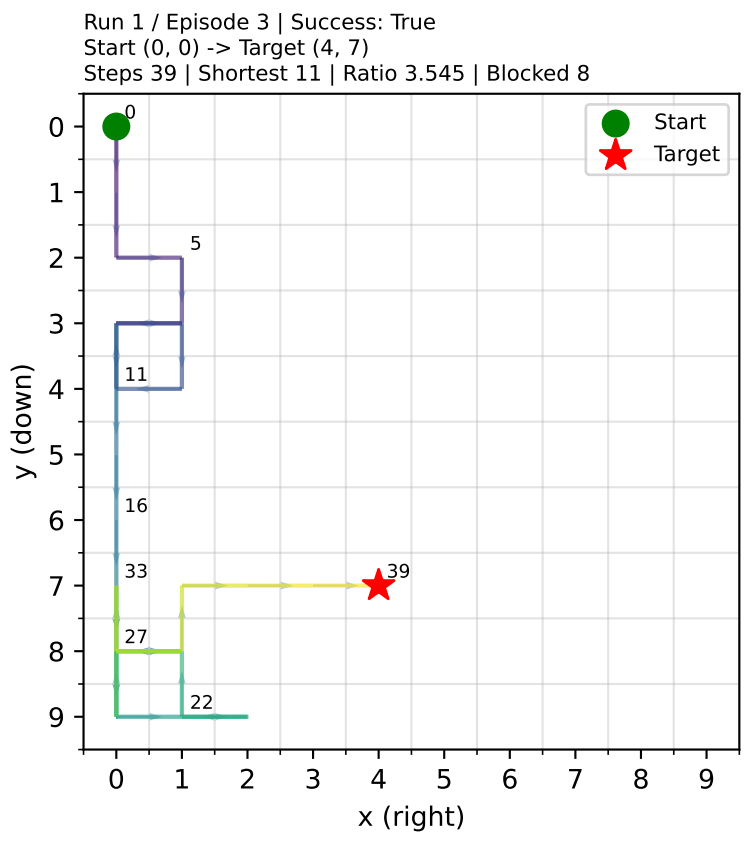
Q-Learning / Representative Path



Random Search / Best Path



Random Search / Representative Path



All evaluation episodes pooled across runs (steps and distance include failures):
Q-Learning: success 10.0% | mean steps (all) 96.70 | mean path ratio (success only, positive shortest distance) 4.188 | mean final distance (all, cells) 5.34
Random Search: success 10.0% | mean steps (all) 93.90 | mean path ratio (success only, positive shortest distance) 3.545 | mean final distance (all, cells) 5.46
